            <div class="cartouche">
              <h5>Embryologie des jumeaux
            </h5>

            <p>Parce que ce n'est pas si simple de comprendre les mots presque
            barbares que sont monozygotes,
            dizygotes, monochoriale, biamniotique même si c'est la première chose
            dont on vous a parlé à
            l'annonce
            de votre grossesse gemellaire ! Alors avec un petit schéma ça devient plus
            simple.</p>

            <p>Le sujet est complexe, disons-le d'emblée.</p>

            <p>Deux grandes catégories : Fréquence</p>

            <p>2 ovules + 2 spermatozoïdes = jumeaux dizygotes (faux, terme péjoratif) 67-
            75%</p>

            <p>1 ovule + 1 spermatozoïde = jumeaux monozygotes (vrais) 25-33%</p>
            <p>Si le placenta est vraiment unique, qu'il existe 2 poches séparées (2
            amnios) ou une seule
            poche (1

```

amnios), la grossesse est monozygote. C'est le seul diagnostic de certitude. Le sexe des enfants est toujours identique. **
**

S'il existe deux placentas (fusionnés ou séparés), 2 poches séparées (2 amnios et 2 chorions, la grossesse peut être

**
**

a) soit dizygote (le plus fréquent) : le sexe des enfants sera ou non différent. Si la nidation des œufs s'opère en des points très proches, on peut avoir l'impression à la naissance, qu'il n'y a qu'un seul placenta : l'erreur consistera à croire qu'il s'agit de monozygotes

**
**

b) soit monozygotes : le sexe des enfants est toujours identique.

Pour les enfants du même sexe, des différences morphologiques à la naissance permettent parfois d'orienter le diagnostic sinon des examens complémentaires sont à faire. Les marqueurs sanguins et immunologiques sont un très bon moyen pour distinguer les 2 catégories de jumeaux. Malheureusement ces analyses sont très chères et ne sont pas effectuées de façon routinière. Parfois le placenta est envoyé en anatomopathologie pour un examen microscopique. Le résultat permet parfois d'orienter le diagnostic de zygosité.

Chez **T.A.D** on se penche plus particulièrement sur les cas des

<!-- Séparateur -->

<div class="separateur separateur-center my-2"></div>

<h3>Vrais jumeaux</h3>

Des jumeaux Monozygotes = Jumeaux homozygotes = 1 seule oeuf =

Bichoriale-biamniotique : 2 placentas + 2 sacs amniotiques

**
**

<i>Souvent diagnostiqué comme étant de "faux" jumeaux, mais leurs ressemblances à la naissance sautent aux yeux de tout un chacun.</i>

Monochoriale-Biamniotique : 1 placenta + 2 sacs amniotiques

Monochoriale - Monoamniotique : 1 placenta + 1 sac amniotique

**
**

Comment les différencier?

**
**

schéma embryologie - <p>Explication : signifie que les jumeaux monozygotes peuvent se développer si la séparation est précoce comme les dizygotes.</p>

</div>
